Set up your Showcase mode, a free service that works hand in hand with prototype selling. It allows you to use stuller.com as your own store inventory, with the prices shown reflecting your mark-up. Use it to interact directly with your customer and provide real time quotes as he chooses his personalized options.

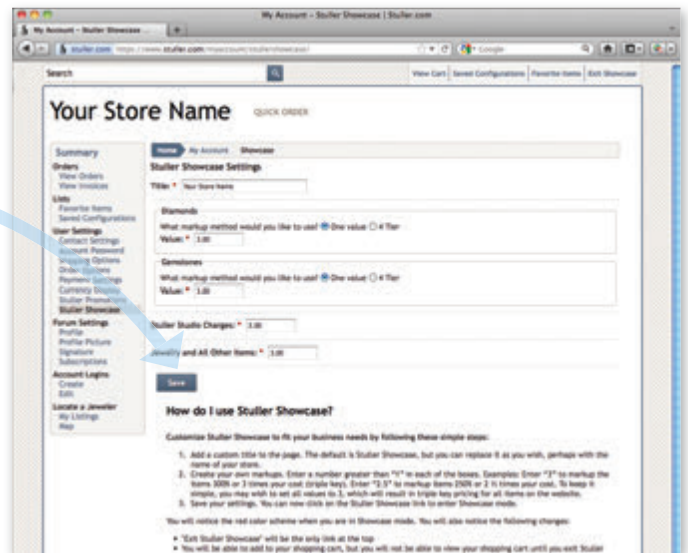

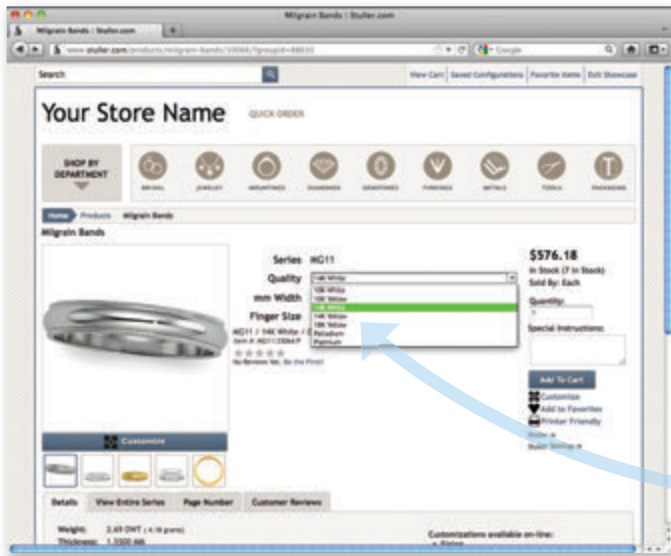

## STEP 1:

To set this option up, simply log in to stuller.com and click Stuller Showcase located at the top of the page.

## STEP 2:

Follow the set-up instructions, save the settings, and click Stuller Showcase at the top of the page once again.

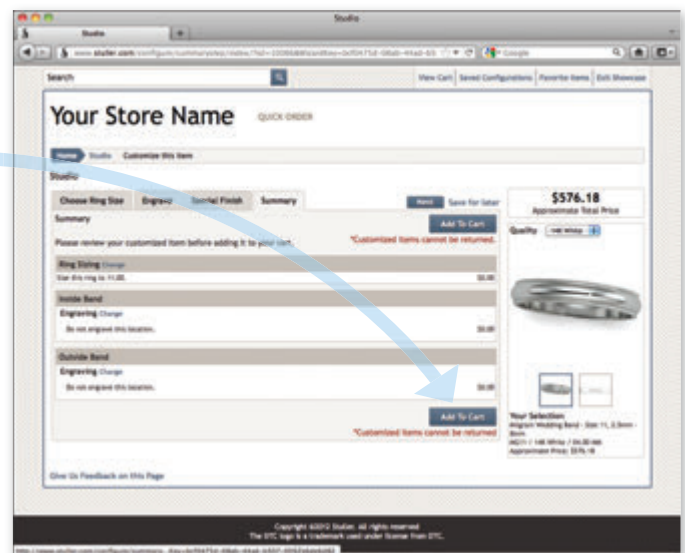

### STEP 3:

Help your customer select a ring that reflects his style. This prototype system features a number of different options to assist you in providing exactly what he wants. Once she zeroes in on a particular style, be sure that you are in Stuller Showcase. Then, key the series number (example 51112 or MG) into search box and press enter. The drop down boxes detail your customer's options, so you can work with him to fill in his choices, such as metal quality, finger size, and mm width. Your marked up price updates with each option change.

### STEP 4:

Review your order. Then click Add to Cart. Check out when you are done or wait until the end of the day to submit all of your orders. You can even schedule it to automatically submit your order at a preset time (located in the settings area).

## CUSTOMIZE YOUR BANDS

Customization options can be requested when you order any of our wedding bands. Call 800-877-7777 or go to [stuller.com/bridal](http://stuller.com/bridal) and select "Customize" when you have chosen your band.

Precious Bond™ Bands  
*Gold With a Silver Lining*

**Gold With a Silver Lining**

Precious Bond bands are made of 100% precious metal. The outer seamless band of 14kt gold is approximately 25% of the total weight. It is designed, finished, and uniquely fused to a sterling silver liner through high performance technology. The crafted piece is finished off with palladium and then a rhodium bond, keeping the finish intact with color and brilliance.

**Caring for Your Precious Bond Band**

Taking care of your Precious Bond band is the same as any other gold band. Because the outer surface of your band is a precious metal, it can be scratched. Your professional jeweler can carefully polish the blemishes out and restore your band to its original state. If removal is necessary by cutting the ring off, your Precious Bond band is covered under a Lifetime Sizing Policy.

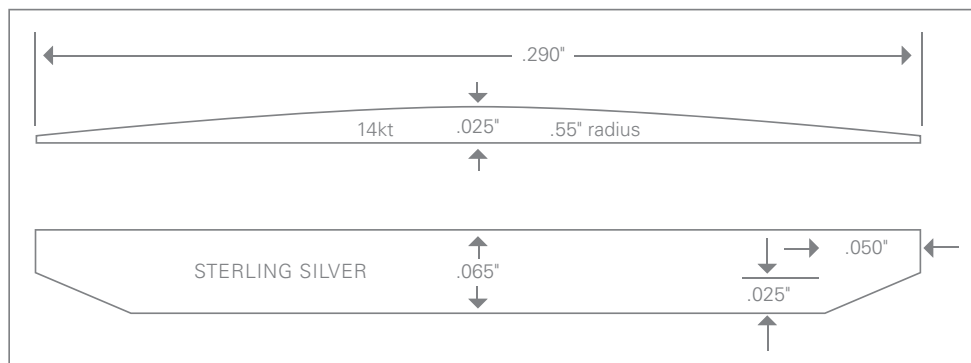

**Sizing Precious Bond Bands**

Your band is made of seamless, extruded gold and silver tubing, fused together without the application of any solder points. We highly recommend your professional jeweler use a ¼ size upwards rule to avoid any "orange peeling." The band may NOT be cut and resized down.

Scooped and Luxecor™ Bands

Quality, Lightweight Gold and Platinum Bands

**Scooped Bands**

Scooped Bands look like traditional wedding bands. But, outward appearances aren't always what they seem. Hidden within the band is a scooped out portion that literally scoops out a portion of the costs associated with a precious metal band. Smooth and comfortable on the finger, it'll be a secret between you and your customer.

**Luxecor™ Bands**

The Luxecor band is a price-point targeted wedding band solution that maintains its superior strength while delivering a classic look. Using patent-pending technology, Luxecor bands are approximately 25% lighter in weight than traditional wedding bands, which translates to lower price points for your customers.

Styles available include Comfort Fit(LCIR) and Milgrain Comfort Fit (LCMGR) bands. The LCIR series includes the option of being engraved on the inside and outside.

**Lifetime Warranty**

Each Luxecor wedding band comes with a lifetime warranty. This warranty provides for replacement (if returned to Stuller) for damage as a result of manufacturing defects. Normal wear and tear is excluded. Rings can only be sized at Stuller.

## EDUCATIONAL INFORMATION

### Ceramic Couture® Jewelry

This is a permanently polished, hi-tech aerospace material, hi-tech ceramic, and Stuller's unique formula of Ceramic Couture.

Discover the amazing look and comfort of Stuller Ceramic Couture rings. In a similar process to Dura Tungsten™, Ceramic Couture hi-tech ceramics are made by powder metallurgy. The process is sintering. Material used to create Ceramic Couture is the natural element of zirconia crystal mixed with the bonding agent yttria. There are three sources of the natural zirconia powder: China, Korea, and Japan. Consistency of the end product depends on many elements of the process, but must start with the finest zirconia. The blanks, finished through sintering to create the scratchproof nature, are then polished on a diamond wheel using diamond compound paste, which results in a polish and shine that will last forever. The Ceramic Couture band is virtually scratchproof. Similarly, a watch will always appear brand new with simple cleaning.

### Care of Ceramic Couture Jewelry

Ceramic Couture jewelry and watches should be cleaned with hot water and soap or alcohol to remove dirt embedded in diamond bezels or between watch links. A steam cleaner may be used.

- Do not use ultrasonic cleaning on ceramic.
- Do not use any cleaning chemicals on ceramic other than alcohol.
- Do not use an ionic cleaner.
- Do not intentionally drop on a hard surface with force, or bring hammer force to Ceramic Couture, as the potential of cracking exists.

On gold and silver inlaid Ceramic Couture, you may notice varying degrees of scratching, denting, or marring to the surface of the soft precious metals after consumer wear. Simply polishing the entire ring on a regular polishing wheel will return shine to the precious metals without affecting the ceramic surface.

### About Dura Cobalt™

Our Dura Cobalt is made of an exclusive composition which provides for stretching the band ¼ to ½ size. It is a beautiful white material that can be cast, or machined. Although a cobalt band scratches, it can be polished as described below with accessible and common wheels and compounds.

### Care and Polishing of Dura Cobalt

Use a felt wheel or Stuller 17-1207 with Stuller Gray Star compound 47-3295 or 47-3297. This will remove the scratches and bring finish to a pre-polish. Clean band thoroughly to remove all pre-polish residue. For final polish, use a soft string buff, Stuller 17-1108, with Picasso Blue rouge, Stuller 47-3246. This will bring the surface to a high mirror luster. After final finish is achieved, clean band thoroughly to remove all polishing residue.

The process listed above is done using a flex-shaft machine, mounted-felt wheel, and a mounted string buff.

### About Vapor Deposition (PVD)

Physical Vapor Deposition, or PVD, is a term used to describe a family of coating processes. The most common of these PVD coating processes are evaporation and sputtering (using magnetic enhanced sources or “magnetrons”, cylindrical, or hollow cathode sources). All of these processes occur in a vacuum at working pressure (typically 10<sup>-2</sup> to 10<sup>-4</sup> mbar) and generally involve bombardment of the substrate to be coated with energetic, positively charged ions during the coating process to promote high density. The result is a very strong bond between the coating and the jewelry. It is used commonly to enhance to life of the material itself, such as drill bits and tools. For jewelry, this protects the stainless steel, titanium, or tungsten material it is applied to in our jewelry.

### About White Dura Tungsten™

Our White Dura Tungsten has the brilliance of white gold and the strength of our Dura Tungsten rings. Our patent applied process of a white coating to our patent pending Dura Tungsten is scratch resistant, colorfast, avoids fading, and does not flake.

The utilized process bonds one of the platinum group materials for the white color with hard chromium for the strength and others to cause the lasting bond of a product. Hard Chrome is nearly as hard as the Dura Tungsten and thereby provides the perfect match. Other softer applications on a hard material may cause a different result. Our resultant product nearly duplicates the process used on the chrome bumpers in the automotive industry. The purpose is to provide scratch resistance against the normal wear of the elements, or scratching.

### About Dura Tungsten® Jewelry

A metal that is permanently polished and always looks brand new. Discover the amazing look and durability of Stuller Dura Tungsten bands. In an extraordinary process, Dura Tungsten bands are made by powder metallurgy, formulated for Stuller using a patent-pending exclusive formula creating the most durable tungsten ring to date. Dura Tungsten composition differs from others by the addition of the most durable titanium carbide powder to strong tungsten and other powders. The rings are polished on a diamond wheel using diamond compound paste, which results in a polish and shine that will last forever. Only a diamond can scratch or polish Dura Tungsten bands.

### Care of Dura Tungsten Jewelry

Dura Tungsten jewelry should be cleaned with hot water and soap or alcohol to remove dirt embedded in diamond bezels. A steam cleaner may be used.

- Do not use ultrasonic cleaning on tungsten.

On gold and silver inlaid Dura Tungsten, you may notice varying degrees of scratching, denting, or marring to the surface of the soft precious metals after consumer wear. Simply polishing the piece on a regular polishing wheel will return shine to the precious metals without affecting the tungsten surface. Cleaning by hand with alcohol is recommended.

### Facts About Dura Tungsten Jewelry

- Dura Tungsten bands are the most durable rings available.
- Dura Tungsten bands are 10 times harder than 18 karat gold, 5 times harder than tool steel, and 4 times harder than titanium.
- Dura Tungsten measures 7-8 on the Mohs hardness scale (Diamonds are the hardest at 10.).
- Due to their extreme hardness, Dura Tungsten bands will hold their shape and shine longer than others.
- Dura Tungsten bands have been referred to as the “permanently polished rings.”
- The composition of ingredients in Dura Tungsten is available upon request due to the patent pending.
- There are no elements known to create adverse effects on skin in our Dura Tungsten jewelry.
- Tungsten is heat attractive.
- Tungsten is most commonly used in light filaments and the highest quality drill bits.

Removal of any Dura Tungsten, tungsten, tungsten carbide, or ceramic band requires cracking the ring. An exclusive tool is now available — The Stuller Tungsten Ring Cracker.

Until now, materials like tungsten and ceramic have been removed by cracking the bands into pieces with standard vice grip-style locking pliers. This is a standard ring-removal process and often a medical professional is required.

You, the professional jeweler, can now easily take care of customers in your store within seconds and with no pressure to the hand. The Stuller Ring Cracker is sold in a boxed kit. It is supplied with two pairs of safety glasses and an instruction guide. Use of the device is simple: Place the Ring Cracker around the ring and adjust the screw accordingly. The Ring Cracker never touches the finger, nor does any of the application. This is very helpful for swollen or injured fingers. Replacement of the cracked band may be covered under our Lifetime Sizing Policy.
