Stone Codes

Stuller's stone coding system provides you with all the important information you need to know about our fine jewelry. Each numeric stone code identifies a specific stone in that set jewelry style. Consult the full stone code index between pages 970-978 to find the complete stone information. This index notates the stone type, quality and enhancement code as well as a full description.

The codes follow the metal quality in the product copy.

American Gem Trade Association (AGTA) Enhancement Codes and Designations

ENHANCEMENT:

Any traditional process other than cutting and polishing that improves the appearance (color/clarity/phenomena), durability, or availability of a gemstone.

- N** The "N" symbol appears on the chart only for natural stones which are not currently known to be enhanced; however, the "N" symbol can also be used for other natural gemstones in the event that a gemstone has received no enhancement and the seller will provide a guarantee that there has been none.
- E** The "E" symbol indicates that a gemstone has undergone its traditional enhancement process.
- SC** The "SC" symbol designates those gemstones that require special care.

Symbols For Specific Forms of Enhancement

ASBL—ASSEMBLED:

"ASBL" is the tag code for products made of multiple layers or combinations of manufactured and/or natural material fused, bonded or otherwise joined together to increase stability and/or imitate the appearance of a natural gemstone, create a unique design or generate unusual color combinations.

B—BLEACHING:

The use of heat, light and/or other agents to lighten or remove a gemstone's color.

C—COATING:

The use of such surface enhancements as lacquering, enameling, inking, foiling, or sputtering of films to improve appearance, provide color, or add other special effects.

D—DYEING:

The introduction of coloring matter into a gemstone to give it new color, intensify present color or improve color uniformity.

F—FILLING:

The filling of surface-breaking cavities or fissures with colorless glass, plastic, solidified borax or similar substances. This process may improve durability, appearance, and/or add weight.

H—HEATING:

The use of heat to effect desired alteration of color, clarity, and/or phenomena. If residue of foreign substances in open fissures is visible under properly illuminated 10X magnification H F should be used.

HP—HEATING & PRESSURE:

The use of heat and pressure combined to effect desired alterations of color, clarity and/or phenomena.

IMIT—IMITATION:

"IMIT" is the tag code used for a manufactured product fabricated in such materials as glass, ceramic or plastic designed to imitate or resemble

the appearance, but not duplicate the characteristic properties of a natural gemstone.

"IMIT" is also the tag code for a simulant, which is defined as man-made single crystal product that is used to simulate the appearance, but not duplicate the characteristic properties of the natural gemstone it imitates.

I—IMPREGNATION:

The impregnation of a porous gemstone with a colorless agent (usually plastic) to improve durability and appearance.

L—LASERING:

The use of a laser and chemicals to reach and alter inclusions in gemstones, usually diamonds.

O—OILING/RESIN INFUSION:

The filling of surface-breaking fissures with colorless oil, wax, resin, or other colorless substances, except glass or plastic, to improve the gemstone's appearance.

SYN—SYNTHETIC:

The tag code may be used to describe "synthetic" materials that have essentially the same optical, physical and chemical properties as a naturally occurring counterpart.

R—IRRADIATION:

The use of neutrons, gamma rays or beta particles (high energy electrons) to alter a gemstone's color. The irradiation may be followed by a heating process.

U—DIFFUSION:

The use of chemicals in conjunction with high temperatures to produce artificial color change and/or asterism-producing inclusions.

W—WAXING/OILING:

The impregnation of a colorless wax, paraffin, and oil in porous opaque or translucent gemstones to improve appearance.
